Armstrong State University Department of Biology Announces a Lecture by

Dr. Elizabeth Harvey

The mechanism and timing of marine microbial mortality and the implications for biogeochemical cycles

Wednesday January 31, 2018  4:00 – 5:15pm
Science Center 1407

Dr. Elizabeth Harvey is an Assistant Professor of Biology at the University of Georgia and the Skidaway Institute of Oceanography. She received her PhD in Oceanography from the University of Rhode Island and was a Postdoctoral Researcher with the Woods Hole Oceanographic Institution (WHOI). Her research focuses on deciphering the mechanisms that drive interactions among marine microbes in hopes of better understanding and predicting biogeochemical cycles and food web structure in the ocean.
