Fix, drop, pop: the role of diazotrophic phytoplankton in the marine carbon cycle

Thursday, October 5, 2017
4:00 – 5:15pm, Science Center 1402

Dr. Elizabeth Sargent is a Limited-term Assistant Professor of Biology at Georgia Southern University. She received her PhD from the University of Southampton National Oceanography Centre. Her research focuses on carbon and nitrogen cycling in the ocean and the role that phytoplankton play in those cycles. Specifically, she examines how the differences in phytoplankton community structure affect the transfer of carbon to depth.
