For courses in which there is a laboratory and lecture component, the percentage of the grade based on each component should be consistent with the credit hours assigned to each part.

Example: CHEM 1211 is a 3-3-4 credit lecture thus 75% of the grade should come from the class component and 25% from the laboratory.

Students are required to pass (have a grade of 60% or better) the laboratory component in order to pass the course.

Students retaking CHEM 1211 or CHEM 1212 may use any previous AASU lab grade if it is available (as long as it is a 60% or better). A record of all CHEM 1211 and CHEM 1212 laboratory grades will be maintained in the departmental office.
