Armstrong eClassroom: Binder

As an integrated component of the Armstrong eClassroom Environment, Binder augments the online learning experience with an end-to-end digital content delivery platform that overcomes the print-to-digital challenges facing today's educators and learners.

**Binder Fetch**
Binder Fetch allows learners to easily pull documents from the Armstrong eClassroom environment directly into the Binder app to work with - online or offline.

**Send to Binder**
Send to Binder allows learners to instantly push content from the Learning Environment directly to the Binder app.

First the Binder tool must be downloaded from the Apple store. It is a free application.

After downloading the app, you must set it up. You will need to set up an EduDentity account or use your Facebook information to log in with.

If using the Fetch option, you will have to log into the Armstrong eClassroom with your Port of Armstrong username and password.

Binder Fetch allows learners to easily pull documents from the Armstrong eClassroom Environment directly into the Binder app to work with - online or offline.
The username and password will be the same as your Port of Armstrong information.

Once you have logged into the Armstrong eClassroom you will then need to find the course and document that you wish to push to the Binder.
Now send the document to the Binder.
You may have to log back into the EduDentity account for the document to be sent to the binder if you have an internet connection.

When looking at documents in the Binder, you will see the documents in the center of the page.
There is a Binder Push Start Guide that will tell you what you can do with the documents.

On the left the swipe out menu has a table of contents.

On the right the swipe out menu has the tools in which to use within the binder tool.
You can use the down arrow at the end of each document to find out which course and module each document came from.

To log out of the binder tool go to the cog wheel in the top right-hand corner of the page.
