Armstrong eClassroom: User Progress

User Progress tells what a student has completed or not. Select User Progress from the dropdown under the Course grades.

This is listed as Class Progress, but individual students can be viewed. In the Grades area at the end, if you place the cursor over any one of these areas, you will see what a student has completed. Click on the bar graph to get a more detailed view.
Here you can view what the student has completed, but are not able to change any of the grades. To change the grade, you will have to go to the item or go into the Gradebook.

The login information shows the last login to the system and to the course.
